

SONOS[®]

2-WAY CONTROL
SOLUTION

EXCLUSIVELY FOR:

PHILIPS pronto
marantz[®]

HOW IT WORKS

The team at AVD Australia and QualiFi has worked tirelessly to bring together these two great products to benefit custom integrated homes.

Simply by using the Philips Pronto TSU9600 or the Marantz RC9001, you'll be able to enjoy the same interface and control that you've come to love with the Sonos multi-room audio system.

You'll be able to:

- See current and next track information including album cover art
- Browse music by artist
- Control volume and play modes
- Link and control playback in different areas
- Manage and edit the music queue
- Not to mention also control your entire multi-room AV and smart home devices like lighting and HVAC

WHAT YOU'LL NEED

You don't need to be a software engineer to put all this together – we've done the hard work for you.

You simply need to have a Pronto or Marantz control panel connected to the same data network as your Sonos system. Then simply choose and install the AVD Sonos interface processor on the same data network that suits the desired usage. It's that simple!

AVD 1+1 SOLUTION gives you control of any single Sonos area via a single Pronto or Marantz control

AVD 4+4 SOLUTION gives you control of up to 4 Sonos areas via up to 4 Pronto or Marantz controls

AVD 8+8 SOLUTION gives you control of up to 8 Sonos areas via up to 8 Pronto or Marantz controls

NOTE: Sonos and Pronto units not included
